alpha-amylase (EC 3.2.1.1) precursor - Aspergillus oryzae
NyAlternate names: Taka-amylase A
C;Species: Aspergillus oryzae
C;Date: 31-Dec-1993 #sequence_revision 31-Dec-1993 #text_change 09-Jul-2004
C;Accession: JN0588
R;Tsukagoshi, N.; Furukawa, M.; Nagaba, H.; Kirita, N.; Tsuboi, A.; Udaka, S.
Gene 84, 319-327, 1989
A;Title: Isolation of a cDNA encoding Aspergillus oryzae Taka-amylase A: evidence for m
A;Reference number: JN0588; MUID:90128276; PMID:2612911

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 6
A48305
alpha-amylase (EC 3.2.1.1) A precursor - Aspergillus awamori
C;Species: Aspergillus awamori
C;Species: Aspergillus awamori
C;Date: 03-Feb-1994 #sequence_revision 03-Feb-1994 #text_change 09-Jul-2004
C;Accession: A48305
R;Korman, D.R.; Bayliss, F.T.; Barnett, C.C.; Carmona, C.L.; Kodama, K.H.; Royer, T.J.;
Curr. Genet. 17, 203-212, 1990
A;Title: Cloning, characterization, and expression of two alpha-amylase genes from Asper A;Reference number: A48305
A;Accession: A48305
A;Accession: A48305
A;Accession: A48305
A;Accession: A48305
A;Residues: I-498 cKOR>
A;Residues: I-498 cKOR>
A;Cross-references: UNIPROT:Q02905
C;Function:
A;Poscription: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Pathway: glycogen/starch degradation
C; Comment: The alpha amylases are encoded by multigene lamily.

A; Description:
C; Function:
A; Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A; Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A; Description:
C; Superfamily: Aspergillus alpha-amylase; alpha-amylase core homology
C; Reywords: glycoprotein; glycosidase; hydrolase; polysaccharide degradation
F; 1-21/Domain: signal sequence #status predicted <SiG>F; 22-499/Product: alpha-amylase #status predicted <MAT>F; 194-321/Domain: alpha-amylase core homology <AMY>F; 198-321/Domain: alpha-amylase core homology <AMY>F; 218/Binding site: carbohydrate (Asn) (covalent) #status predicted
                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240

Apparation: Aspergillus niger
C;Species: Asservation: Asservation 10-Sep-1999 #text_change 10-Sep-1999
C;Accession: Asservation: Asservation 10-Sep-1999 #text_change 10-Sep-1999
C;Accession: Asservation: Brady, L.; Brzozowski, A.M.; Derewenda, Z.; Dodson, G.G.; Jensen, V.J.; Pet
Biochemistry 29, 6244-6249, 1990
A;Title: Calcium binding in alpha-amylases: an X-ray diffraction study at 2.1-angstrom
A;Reference number: A35282
A;Stecence number: A35282
A;Stecence number: A35282
A;Stecence number: Asservation acid sequence not shown; not compared with conceptual tr
A;Molecule type: mRNA
A;Residuae: 1-484 <BOBS
C;Function:
A;Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Pethway: glycogen/fetarch degradation
C;Superfamily: Aspergillus alpha-amylase; alpha-amylase core homology
C;Keywords: glycoprotein; glycosidase; hydrolyse; polysaccharide degradation
F;173-300/Domain: alpha-amylase core homology <AMY>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

C.Function:
A.Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A.Pathway: glycogen/starch degradation
A.Pathway: glycogen/starch degradation
C.Superfamily: Aspergillus alpha-amylase; alpha-amylase core homology
C.Superfamily: Aspergillus alpha-amylase; hydrolase; polysaccharide degradation
F;1-20/Domain: signal sequence #status predicted <SIG>

Fermentability of beer worts (including those made from unmalted cereals), in the starch industry to make high maltose and high DE syrups (starch saccharification), in the alcohol industry to reduce fermentation time, in the cereal food industry for reduce fermentation and improvement of chilled and frozen dough, and in the forestry industry for low-temperature modification of starch. Sold under the name Fungamyl by Novozymes.

MISCELLANBOUS: The sequence of AMYl and AMY2 is shown.

SINILARITY: Belongs to the glycosyl hydrolase 13 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE-80227691; PubMed-6156152;

-! CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         linkages in oligosaccharides and polysaccharides.
--- COFACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory at high concentrations (By similarity).
--- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

```
SUBCELLULAR LOCATION: Secreted.
SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
SIMILARITY: Contains 1 carbohydrate binding type-21 (CBM21)
                                                                                                                                                   ... amyl_cat_sub.

"Characterization of a novel alpha-amylase from Lipomyces kononenkoae and expression of its gene (LRA1) in Saccharomyces cerevisiae.";
Curr. Genet. 28:526-533 (1955).
-!-CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.
-!- COFACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory at high concentrations (By similarity).

Patent No. 5631149
GENERAL INFORMATION:
APPLICANT: MATSUI, IKUO
APPLICANT: MISTRIA, SACHIO
APPLICANT: HONDA, KOICHI
TITLE OF INVENTION: VARIANT-TYPE CARBOHYDRATE HYDROLASE,
TITLE OF INVENTION: VARIANT GENE OF THE ENZYME AND METHOD FOR PRODUCING
TITLE OF INVENTION: OLIGOSACCHARIDE USING THE ENZYME
NUMBER OF SEQUENCES: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2 TNADKWRSQSIYQIVTDRFARTDGDTSASCNTEDRLYCGGSPQGIIKKLDYIKDMGFTAI

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 5, A
